Exam : **1z0-1123-24**

Title : Oracle Cloud Infrastructure
2024 Migration Architect
Professional

Vendor : Oracle

Version : DEMO

NO.1 One of your customers is planning to consolidate many of their single-instance databases into a suitable database solution in OCI. Their goal is to optimize resource utilization and reduce maintenance and management overhead. What would you suggest as a migration architect?

- A. Consolidate all databases into Exadata Database on Dedicated Infrastructure using Zero Downtime Migration
- B. Group and migrate related databases into OCI Base Database service on multitenant architecture
- C. Group related databases and use the cloud premigration advisor tool to get consolidation recommendation
- D. Use Oracle Estate Explorer to identify databases that can be migrated to Autonomous Database and the recommended method for migration

Answer: B

Explanation:

Grouping and migrating related databases into OCI Base Database service on multitenant architecture allows for efficient resource utilization and reduced management overhead.

NO.2 What is the primary function of the Data Transfer Utility provided by Oracle Cloud Infrastructure(OCI)?

- A. To automate data replication between OCI compute instances
- B. To transfer data between OCI regions
- C. To transfer data between different OCI Compartments
- D. To prepare transfer disks for data shipment to Oracle

Answer: D

Explanation:

The Data Transfer Utility is primarily used to prepare transfer disks for data shipment to Oracle's data centers.

NO.3 Which option best describes the term Inventory Asset in the context of Oracle Cloud Migrations (OCM) service?

- A. Virtual Machines that have been specifically selected to migrate to OCI within the OCM UI
- B. The entire on-premises environment that is subject to discovery and analysis by OCM
- C. Virtual Machines that have been automatically discovered and listed in the OCM UI
- D. An OCI Compute instance representing the migrated on-premises asset in the OCM UI

Answer: A

Explanation:

Virtual Machines that have been specifically selected to migrate to OCI within the OCM UI are considered Inventory Assets. These assets are the ones that will undergo the migration process to Oracle Cloud Infrastructure as part of the OCM service.

NO.4 In the context of Oracle Cloud Infrastructure (OCI) Object Storage replication, what happens to objects that were uploaded to the source bucket before the replication policy was created?

- A. Are immediately replicated to the destination bucket upon policy creation
- B. Are not replicated
- C. Are asynchronously replicated to the destination bucket upon policy creation
- D. Are automatically deleted from the source bucket

Answer: B

Explanation:

Objects that were uploaded to the source bucket before the replication policy was created are not replicated to the destination bucket. The replication policy only applies to objects uploaded after the policy is set up and does not include pre-existing objects.

NO.5 How does the Copy to another region feature in Oracle Cloud Infrastructure (OCI) aid in achieving smooth transitions during Block Volume migration?

- A.** It compresses backup data before transferring, thereby expediting the migration process
- B.** It automates the migration process by transferring applications between regions
- C.** It ensures real-time data synchronization during migration for minimal downtime
- D.** It replicates Block Volume backups to a target region, enabling smooth data migration

Answer: D

Explanation:

The correct choice is that the Copy to another region feature in OCI aids in achieving smooth transitions during Block Volume migration by replicating Block Volume backups to a target region. This enables a seamless data migration process without the need for manual backup and restore operations.

NO.6 You are a migration architect responsible for migrating 100 TB of on-premises data to Oracle Cloud Infrastructure (OCI). Because of limited bandwidth and security concerns, transferring the data over the public Internet is not feasible. Which OCI service would you recommend to efficiently transfer the large volume of on-premises data to OCI while ensuring data security?

- A.** Snowball
- B.** Data Transfer Service
- C.** Data Integration
- D.** Storage Gateway

Answer: B

Explanation:

Data Transfer Service in OCI is specifically designed for efficiently transferring large volumes of data to OCI while ensuring data security. It provides high-speed data transfer over dedicated network connections, making it the ideal choice for migrating 100 TB of on-premises data to OCI.
